Today, chronic diseases represent the major share of the burden of disease in Europe and are responsible for 86% of all deaths\(^1\). They affect more than 80% of people aged over 65 and represent a major challenge for health and social systems. 70 to 80% of health care budgets, an estimated €700 billion per year are spent on chronic diseases in the European Union\(^2\)\(^3\)\(^4\).

The sustainability of our health and social systems is at stake. In response to the call of the 2011 UN High Level Meeting on Non Communicable Diseases\(^5\), we need new approaches to investing in health, moving beyond limiting expenditure to addressing the demand for health and social services, much of which is related to chronic diseases. Investing in health\(^6\) implies...
Today...

✓ Lifestyle-related Diseases are the leading Cause of Death and Disability on the Planet today (WHO: 80% of deaths in Europe).

✓ Lifestyle Factors are the Main Drivers in Chronic Disease Pathogenesis.

✓ A reductionist Approach has done nothing to reverse the Chronic Disease Epidemic.
Lifestyle Medicine is a branch of evidence-based medicine in which comprehensive lifestyle changes (including nutrition, physical activity, psychological stress, social support and environmental exposures) are used to prevent, treat and even reverse the progression of chronic diseases by addressing their underlying causes.
An interdisciplinary and integrated approach to noncommunicable diseases

Nutrition
Nutrition plays a key role in the pathogenesis of chronic lifestyle-related diseases.

Psychology
Chronic stress influences health directly and indirectly through a change in lifestyle behaviors.

Physical Activity
Insufficient physical activity is a leading cause of chronic lifestyle-related diseases.

Social Factors & Environment
Social factors, communities and the environment influence human biology and lifestyle behaviors.
